Contents

1	Python Basics	3
1.1	Run Python App	3
1.2	Python Virtual Environment	3
2	Python Packages	6

1 Python Basics

Python

Python is a scripting programming language that means it has interpreter instead of compiler.

1.1 Run Python App

Run Python file and continue file in scripting space

```
$ python -i <file_name>.py

----- ex -----
D:\learn\learn-python\doc>python -i main.py
code output: 21
>>> i
21
>>> i**2
441
>>> exit()
```

Save app output as a .txt file in cmd

```
$ Python <app_name> > <output_file_name>.txt

----- ex -----
D:\learn\learn-python\doc>python main.py > output.txt

D:\learn\learn-python\doc>more output.txt
code output: 21
```

Pay attention to Python's operator priority!

See this:

```
>>> 3 + 5 % 4 == 0
False
>>> (3 + 5) % 4 == 0
True
```

1.2 Python Virtual Environment

Create - Activate - Deactivate in cmd

```
-- create
$ python -m venv <virtual_environment_name>
```

```

-- activate
$ <virtual_environment_name>\Scripts\activate.bat

-- deactivate
$ deactivate

----- ex -----
D:\dir\b
code
learn
library

D:\python -m venv prjenv

D:\dir\b
code
learn
library
prjenv

D:\prjenv\Scripts\activate

(prjenv) D:\pip install lightweight
Collecting lightweight
  Downloading lightweight-1.0.0.dev52-py3-none-any.whl (256 kB)
    ----- 256.9/256.9 KB 450.9 kB/s eta 0:00:00
...

(prjenv) D:\pip freeze
MarkupSafe==2.1.2
mistune==0.8.4
...

```

Python Root packages usual path in windows

C:\Users\User\AppData\Local\Packages\PythonSoftwareFoundation.Python.3.9\
 _qbz5n2kfra8p0\LocalCache\local-packages\Python39\site-packages\

See all installed packages in current python environment

```

$ pip freeze

----- ex -----
C:\Users\User>pip freeze
contourpy==1.0.7
cyclor==0.11.0
fonttools==4.38.0

```

Save all package names in requirements.txt

```
$ pip freeze > requirements.txt

----- ex -----
C:\Users\User>pip freeze > requirements.txt

C:\Users\User>more requirements.txt
contourpy==1.0.7
cyclor==0.11.0
fonttools==4.38.0
```

Delete Packages

```
-- first save all package names in "requirements.txt"

-- one by one
$ pip uninstall -r requirements.txt

-- all
$ pip uninstall -r requirements.txt -y

----- ex -----
C:\Users\User>pip freeze
contourpy==1.0.7
cyclor==0.11.0
fonttools==4.38.0

C:\Users\User>pip freeze > requirements.txt

C:\Users\User>pip freeze

C:\Users\User>
```

Connect Python app to Google Sheet

- 1 first
- 2 second
- 3 third

2 Python Packages
